Praktikum – Bagian 1: Firebase Setup

Langkah	Keterangan
1	<p>Buatlah project react pada directory yang baru.</p> <pre> PS D:\data\Users\User\Documents\College\Framework Prog\framework_prog\10thWeek> npx create-react-app firebase-react-hunayn Creating a new React app in D:\data\Users\User\Documents\College\Framework Prog\framework_prog\10thWeek\firebase-react-hunayn. Installing packages. This might take a couple of minutes. Installing react, react-dom, and react-scripts with cra-template... > core-js@2.6.12 postinstall D:\data\Users\User\Documents\College\Framework Prog\framework_prog\10thWeek\firebase-react-hunayn\node_modules\babel-runtime\node_modules\core-js > node -e "try{require('./postinstall')}catch(e){}" > core-js@3.10.1 postinstall D:\data\Users\User\Documents\College\Framework Prog\framework_prog\10thWeek\firebase-react-hunayn\node_modules\core-js > node -e "try{require('./postinstall')}catch(e){}" npm test Starts the test runner. npm run eject Removes this tool and copies build dependencies, configuration files and scripts into the app directory. If you do this, you can't go back! We suggest that you begin by typing: cd firebase-react-hunayn npm start Happy hacking! PS D:\data\Users\User\Documents\College\Framework Prog\framework_prog\10thWeek> </pre> <p>Setelah itu pada folder src buatlah file dengan nama index.js ; Login.js ; Join.js ; Header.js ; routes.js ; styles.css (file lain yang ada di folder src bisa dihapus saja).</p>  <p>Karena pada praktikum ini kita menggunakan react router dom, maka lakukan npm install react-router-dom dahulu.</p>

```

```

Jika sudah, isilah code seperti dibawah ini sesuai dengan nama file masing-masing.

index.js

```

src > JS index.js > ...
1  import React, { useState } from "react";
2  import ReactDOM from "react-dom";
3  import { Switch, BrowserRouter as Router, Route } from "react-router-dom";
4  import "./styles.css";
5
6  export const AuthContext = React.createContext(null);
7
8  function App() {
9    const [isLoggedIn, setLoggedIn] = useState(false);
10
11    return (
12      <AuthContext.Provider value={{ isLoggedIn, setLoggedIn }}>
13        Is logged in? {JSON.stringify(isLoggedIn)}
14        <div className="App">
15          <Router>
16            <Header />
17            <Switch>
18              {routes.map((route) => (
19                <Route
20                  key={route.path}
21                  path={route.path}
22                  exact={route.exact}
23                  component={route.main}
24                />
25              ))}
26            </Switch>
27          </Router>
28        </div>
29      </AuthContext.Provider>
30    );
31  }
32
33  const rootElement = document.getElementById("root");
34  ReactDOM.render(<App />, rootElement);
35

```

Login.js

```

src > JS Login.js > Login
1  import React, { useState, useContext } from "react";
2  import { AuthContext } from "../index";
3
4  const Login = () => {
5    const [email, setEmail] = useState("");
6    const [password, setPassword] = useState("");
7    const [error, setErrors] = useState("");
8
9    const Auth = useContext(AuthContext);
10   const handleForm = (e) => {
11     e.preventDefault();
12     console.log(Auth);
13     Auth.setLoggedIn(true);
14   };
15
16   return (
17     <div>
18       <h1>Login</h1>
19       <form onSubmit={(e) => handleForm(e)}>
20         <input
21           value={email}
22           onChange={(e) => setEmail(e.target.value)}
23           name="email"
24           type="email"
25           placeholder="email"
26         />

```

Join.js

```

src > JS Join.js > ...
1  import React, { useState, useContext } from "react";
2  import { AuthContext } from "../index";
3
4  const Join = () => {
5    const [email, setEmail] = useState("");
6    const [password, setPassword] = useState("");
7    const [error, setErrors] = useState("");
8
9    const Auth = useContext(AuthContext);
10   const handleForm = (e) => {
11     e.preventDefault();
12     console.log(Auth);
13     Auth.setLoggedIn(true);
14   };
15
16   return (
17     <div>
18       <h1>Join</h1>
19       <form onSubmit={(e) => handleForm(e)}>
20         <input
21           value={email}
22           onChange={(e) => setEmail(e.target.value)}
23           name="email"
24           type="email"
25           placeholder="email"
26         />

```

```

26   />
27   <input
28     onChange={(e) => setPassword(e.target.value)}
29     name="password"
30     value={password}
31     type="password"
32     placeholder="password"
33   />
34   <hr />
35   <button class="googleBtn" type="button">
36     
40     Join With Google
41   </button>
42   <button type="submit">Login</button>
43   <span>{error}</span>
44 </form>
45 </div>
46 );
47 };
48
49 export default Join;
50

```

Header.js

```
src > JS Header.js > ...
1  import React from "react";
2  import routes from "../routes";
3  import { Link } from "react-router-dom";
4
5  const Header = () => (
6    <ul className="nav">
7      {routes.map((route, i) => (
8        <li key={i}>
9          <Link to={route.path}>{route.name}</Link>
10        </li>
11      ))}
12    </ul>
13  );
14
15  export default Header;
16
```

routes.js

```
src > JS routes.js > [0] default
1  import React from "react";
2  import Login from "../Login";
3  import Join from "../Join";
4
5  const routes = [
6    { name: "Join", path: "/", exact: true, main: () => <Join /> },
7    { name: "Login", path: "/login", exact: true, main: () => <Login /> },
8  ];
9
10 export default routes;
11
```

styles.css

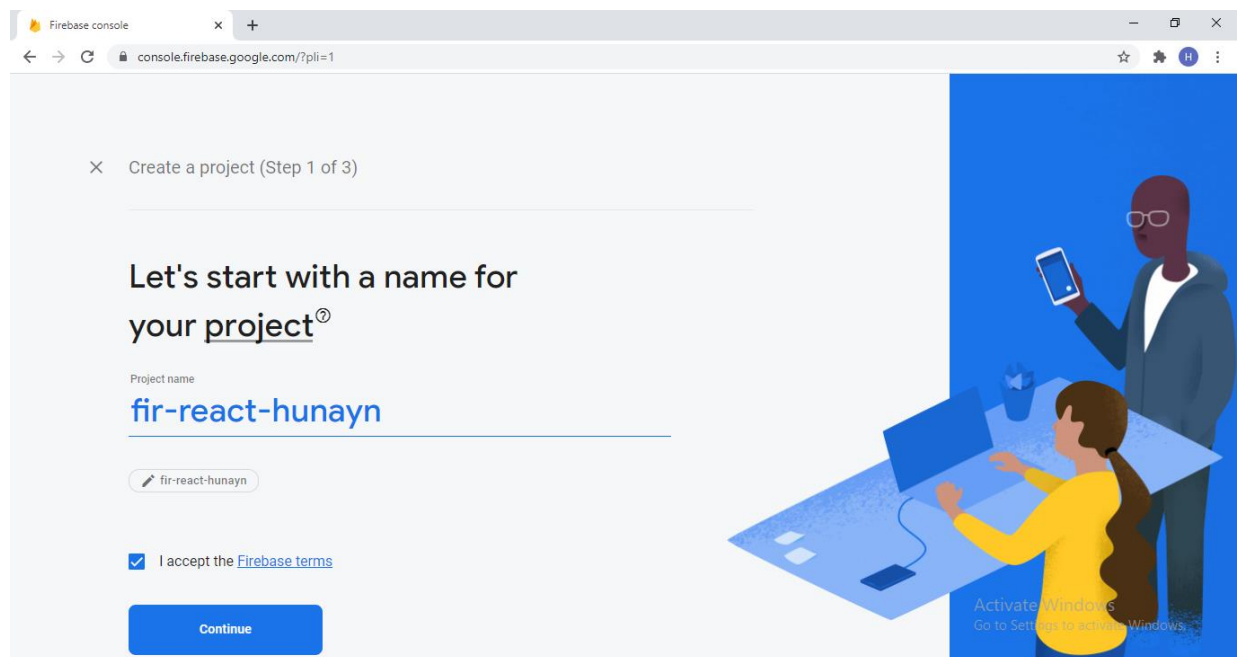

```
src > # styles.css > .nav li
1  .App {
2    font-family: sans-serif;
3    padding: 50px;
4  }
5
6  h1 {
7    margin: 0 0 25px 0;
8    text-align: left;
9  }
10
11  form {
12    display: flex;
13    flex-direction: column;
14  }
15
16  input {
17    max-width: 450px;
18    width: auto;
19    border: none;

21    box-shadow: 0 1px 3px rgba(0, 0, 0, 0.12), 0 1px 2px rgba(0, 0, 0, 0.24);
22    transition: all 0.3s cubic-bezier(0.25, 0.8, 0.25, 1);
23    padding: 10px;
24  }
25
26  button {
```

```

26 button {
27   width: 125px;
28   box-shadow: 0 1px 3px rgba(0, 0, 0, 0.12) 0 1px 2 px rgba(0, 0, 0, 0.24);
29   border: none;
30   padding: 7px;
31   text-align: center;
32   cursor: pointer;
33 }
34
35 button[type="submit"] {
36   background-color: #4c566a;
37   color: white;
38   font-size: 14px;
39   font-weight: 900;
40   border-radius: 5px;
41   text-transform: uppercase;
42   padding: 15px;
43 }
44
45 .googleBtn {
46   width: 225px;
47   margin: 0 0 50px 0;
48   display: flex;
49   justify-content: center;
50   font-size: 16px;
51 }
52
53 .googleBtn img {
54   width: 16px;
55   height: 16px;
56   padding: 0;
57   margin: 0 5px;
58   vertical-align: middle;
59 }
60
61 .nav {
62   display: flex;
63   text-decoration: none;
64   list-style-type: none;
65   justify-content: flex-start;
66   margin: 0 0 50px 0;
67   padding: 0;
68 }
69
70 .nav li {
71   margin: 0 10px;
72 }
73

```

Kemudian buka <https://console.firebase.google.com/> setelah itu buat project baru dengan nama project yang kalian inginkan.

Pada cmd lakukan perintah `npm install --save firebase` di directory project react untuk menambahkan dependency firebase kedalam react kita.

```
PS D:\data\Users\User\Documents\College\Framework Prog\framework_prog\10thWeek\firebase-react-hunayn> npm install --save firebase
```

```
> core-js@3.6.5 postinstall D:\data\Users\User\Documents\College\Framework Prog\framework_prog\10thWeek\firebase-react-hunayn\node_modules\@fireb
se\polyfill\node_modules\core-js
> node -e "try{require('./postinstall')}catch(e){}"
```

Thank you for using core-js (<https://github.com/zloirock/core-js>) for polyfilling JavaScript standard library!

The project needs your help! Please consider supporting of core-js on Open Collective or Patreon:

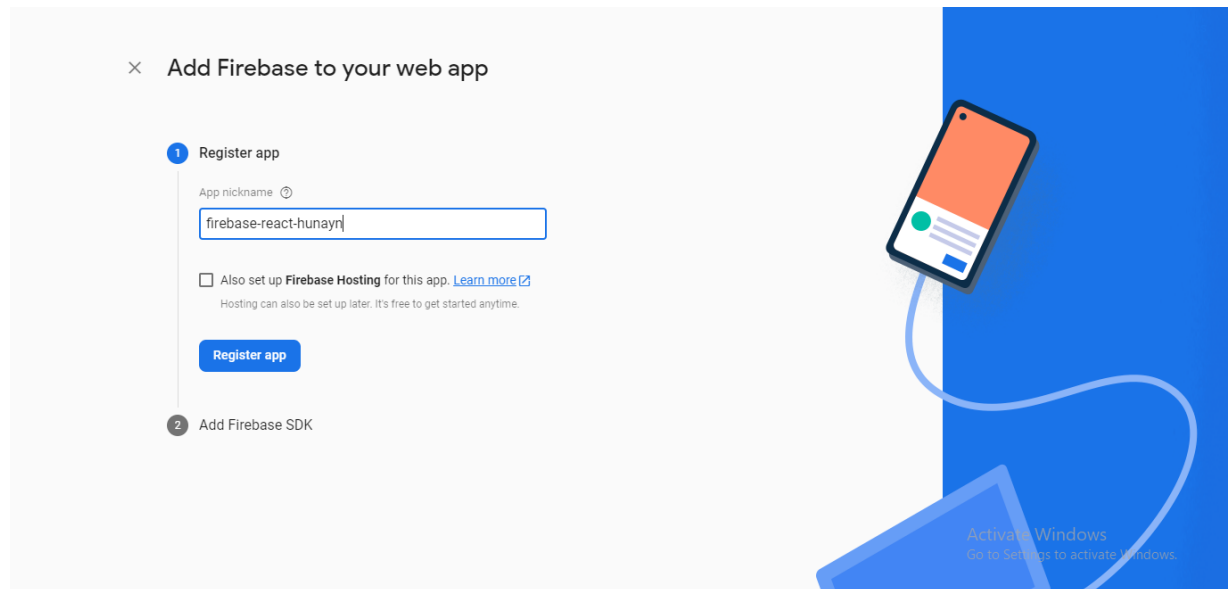

```
> https://opencollective.com/core-js
> https://www.patreon.com/zloirock
```

Also, the author of core-js (<https://github.com/zloirock>) is looking for a good job -)

```
> protobufjs@6.10.2 postinstall D:\data\Users\User\Documents\College\Framework Prog\framework_prog\10thWeek\firebase-react-hunayn\node_modules\pro
tobufjs
> node scripts/postinstall
```

npm WARN @babel/plugin-bugfix-v8-spread-parameters-in-optional-chaining@7.13.12 requires a peer of @babel/core@^7.13.0 but none is installed. You

Setelah itu lakukan setting pada project firebase yang kalian buat tadi agar react kalian dapat terhubung dengan firebase. Pada setting get started pilih yang untuk web.

Lalu setelah itu anda akan mendapatkan script konfigurasi yang akan menjadi penghubung dengan project react anda. Salin script tersebut lalu tempel pada file baru di dalam folder src yang kita beri nama firebase.config.js (gambar dibawah adalah contoh, sesuaikan script yang anda dapat dari firebase).

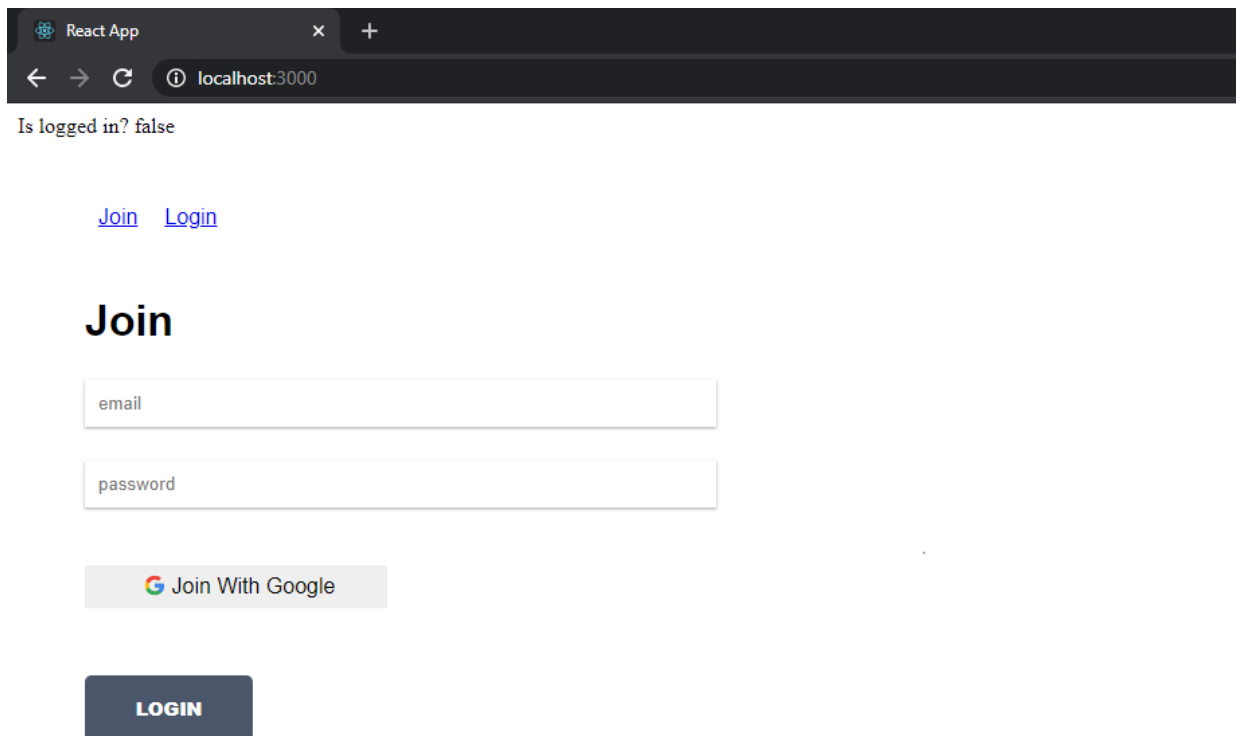

```
src > JS firebase.config.js > ...
1 // Your web app's Firebase configuration
2 // For Firebase JS SDK v7.20.0 and later, measurementId is optional
3 var firebaseConfig = {
4   apiKey: "AIzaSyAluVxKx0BTAvFEPZ4n6SJKQrmvP3qyr1E",
5   authDomain: "fir-react-hunayn.firebaseio.com",
6   projectId: "fir-react-hunayn",
7   storageBucket: "fir-react-hunayn.appspot.com",
8   messagingSenderId: "460799444409",
9   appId: "1:460799444409:web:875f84a081e538ce1c2268",
10  measurementId: "G-X4EXCZJH30",
11 };
12
13 export default firebaseConfig;
14
```

Lalu lakukan inisialisasi firebase config dengan menambahkan code pada index.js seperti dibawah ini.

```
1 import React, { useState } from "react";
2 import ReactDOM from "react-dom";
3 import { Switch, BrowserRouter as Router, Route } from "react-router-dom";
4 import routes from "./routes.js";
5 import Header from "./Header";
6 import "./styles.css";
7 import * as firebase from "firebase"
8 import firebaseConfig from "firebase.config";
9
10 firebase.initializeApp(firebaseConfig)
11
12 export const AuthContext = React.createContext(null);
```

Jika sudah berhasil maka coba jalankan, jika tidak terdapat error maka project anda telah terhubung dengan firebase.

React App x +

localhost:3000

Is logged in? false

[Join](#) [Login](#)

Join

email

password

 Join With Google

LOGIN

Selanjutnya aktifkan terlebih dahulu authentication email dan google pada firebase console.

 Enable

Google sign-in is automatically configured on your connected iOS and web apps. To set up Google sign-in for your Android apps, you need to add the [SHA1 fingerprint](#) for each app on your [Project Settings](#).

 Update the [project-level setting](#) below to continue

Project public-facing name 

project-460799444409

Project support email 

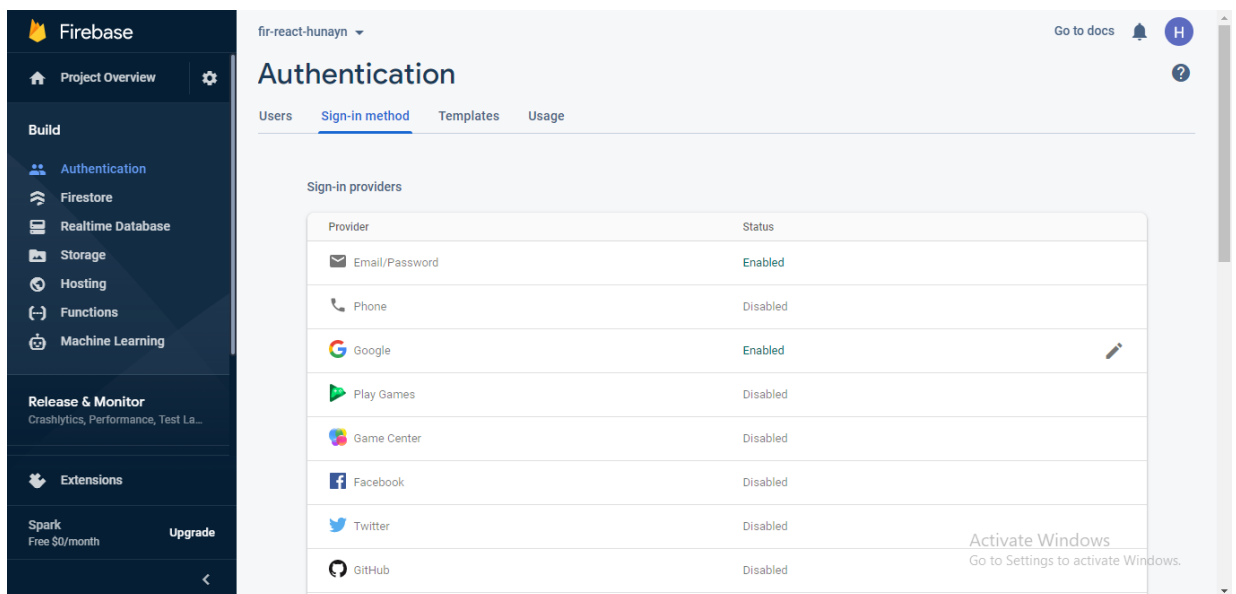

hunaynr@gmail.com

Safelist client IDs from external projects (optional) 

Web SDK configuration 

Cancel

Save

Provider	Status
Email/Password	Enabled
Phone	Disabled
Google	Enabled
Play Games	Disabled
Game Center	Disabled
Facebook	Disabled
Twitter	Disabled
GitHub	Disabled

Jika sudah, lakukan edit code pada Join.js untuk membuat email dan password untuk user. Pertama import dahulu objek firebase agar bisa digunakan pada Join.js dengan code berikut.

```
src > JS Join.js > [e] Join
1  import React, { useState, useContext } from "react";
2  import { AuthContext } from "../index";
3  import firebase from "firebase";
4
```

Kemudian cari method auth dan lakukan edit code seperti dibawah ini.

```

10  const Auth = useContext(AuthContext);
11  const handleForm = (e) => {
12    e.preventDefault();
13    firebase
14      .auth()
15      .createUserWithEmailAndPassword(email, password)
16      .then((res) => {
17        if (res.user) Auth.setLoggedIn(true);
18      })
19      .catch((e) => {
20        setErrors(e.message);
21      });
22
23    // console.log(Auth);
24    // Auth.setLoggedIn(true);
25  };
26

```

Silahkan coba pada aplikasi dengan klik join, lalu isikan email dan password. Coba cek pada firebase maka user telah terbuat seperti dibawah ini.

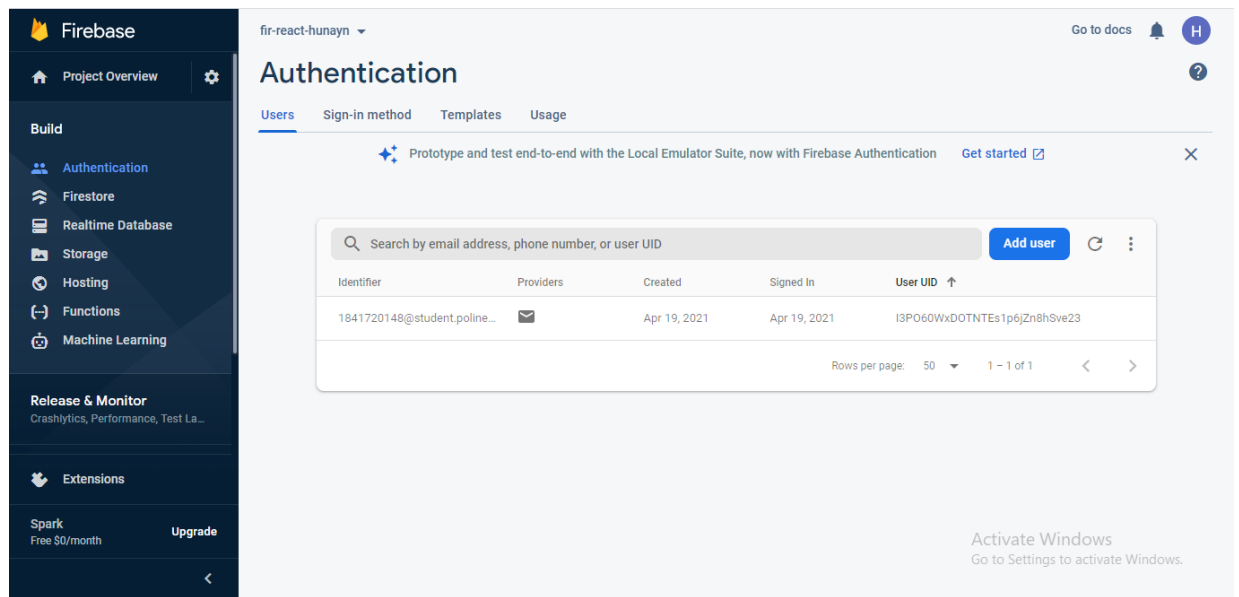

Is logged in? false

[Join](#) [Login](#)

Join

 Join With Google

JOIN

Langkah selanjutnya adalah bagaimana caranya agar kita dapat sign in/login dengan akun yang telah dibuat, yaitu dengan cara melakukan edit code pada Login.js. Pertama import dahulu objek firebase agar bisa digunakan pada Login.js dengan code berikut.

```
1  import React, { useState, useContext } from "react";
2  import { AuthContext } from "../index";
3  import firebase from "firebase";
4
```

Kemudian cari method auth dan lakukan edit code seperti dibawah ini.

```
10  const Auth = useContext(AuthContext);
11  const handleForm = (e) => {
12    e.preventDefault();
13    firebase
14      .auth()
15      .signInWithEmailAndPassword(email, password)
16      .then((res) => {
17        if (res.user) Auth.setLoggedIn(true);
18      })
19      .catch((e) => {
20        setErrors(e.message);
21      });
22  };
23
```

Silahkan coba pada aplikasi dengan cara klik login kemudian masukkan email dan password yang telah didaftarkan, kemudian perhatikan keterangan login pada pojok kiri atas dengan perubahan kondisi dari false menjadi true yang menandakan anda telah berhasil login.

Soal Latihan Praktikum

Pada button join with google belum terdapat aksi, silahkan tambahkan function agar dapat mendaftar dengan cara klik button tersebut lalu memilih akun gmail yang akan dipakai.

The screenshot shows the Firebase Authentication console for the project 'fir-react-hunayn'. The left sidebar contains the Firebase navigation menu with options like Project Overview, Build (Authentication, Firestore, Realtime Database, Storage, Hosting, Functions, Machine Learning), Release & Monitor, Extensions, and Spark. The main content area is titled 'Authentication' and has tabs for Users, Sign-in method, Templates, and Usage. The 'Users' tab is active, displaying a table of users. Above the table is a search bar and an 'Add user' button. The table lists two users with their identifiers, providers, creation and sign-in dates, and User IDs. At the bottom right, there is a 'Rows per page' dropdown set to 50 and a pagination indicator showing '1 - 2 of 2'.
